

10 / 510 016 DT04 Rec'd PCT/FTO 30 SEP 2004

Claims

1

2 A downhole tool for collecting and retrieving junk 3 from a well bore, the tool comprising: a cylindrical 4 body attachable in a work string; a multi-faceted 5 surface comprising a plurality of projections б arranged at an end of the body for contacting with 7 and breaking up junk; and a plurality of inlet ports 8 through which the broken up junk passes into a trap 9 for collection. wherein each projection is located / 10 between adjacent inlet ports. 11

12

13 2. A downhole tool as claimed in Claim 1 wherein the 14 projections each include a plurality of tungsten 15 carbide coated surfaces.

16

17 3. A downhole tool as claimed in any preceding Claim
18 wherein the tool further includes a sleave located
19 around the body, the sleave including filter means
20 for filtering debris from fluid passing there
21 through.

22

23 4. A downhole tool as claimed in Claim 3 wherein a trap 24 is provided in an annular space between the body and 25 the sleeve.

26

27 5. A downhole tool as claimed in any preceding Claim 28 wherein the ports have a flow path parallel to a 29 longitudinal axis of the tool.

30

31 6. A downhole tool as claimed in any preceding Claim 32 wherein each inlet port includes a valve.

A downhole tool as claimed in any one of Claims 3 to 1 6 wherein the tool includes a throat, the throat 2 being located adjacent to the projections and having 3 a diameter narrower than a diameter of the sleeve. 5 A downhole tool as claimed in any preceding Claim 6 8. wherein the cylindrical body includes an axial bore 7 to permit fluid flow through the work string. 8 9 A downhole tool as claimed in Claim 7 wherein the 10 tool includes one or more milling elements located 11 adjacent the throat and distal to the inlet ports. 12 13 10. A method of collecting and retrieving junk within a 14 well bore, comprising the steps: 15 16 providing a multi-faceted contact surface on a 17 (a) work string, the surface including a plurality 18 of projections and a plurality of inlet ports, 19 each projection being located between adjacent 20 inlet ports; 21 breaking up large pieces of junk by contact with 22 **(b)** the surface; 23 collecting the broken-up junk through the inlet 24 25 ports; and storing the broken-up junk in a trap adjacent 26 (d) the inlet ports. 27 28 11. A method as claimed in Claim 10 wherein the method 29 includes the steps of providing a mill ahead of the 30 surface and jetting milled junk from the mill towards 31 32 the inlet ports.

33

1 12. A method as claimed in Claim 10 or Claim 11 wherein
2 the method includes the step of operating one or more
3 valves at each inlet port to prevent the broken-up
junk from exiting the trap.
